Summary

IT Leader with a 15 year trajectory in JVM Backend technologies, I excel in developing cloud-native, high-scalable systems and product-oriented development.

My expertise lies not just in technical leadership but also in driving teams towards faster and successful project deliveries through cross-functional collaboration.

Experience

Engineering Manager

2022-Now *DKB Code Factory*

- Led the transition from a support team of external Backend developers, to a product-focused, full-stack team with internal developers
- Hands-on involvement in the development and maintenance of new services with Kotlin and Spring Boot on Kubernetes. My role encompassed coding, code reviews, architecture, and leading the launch of several services, creating a new and centralized space within the platform for users to access both old and new products
- Actively engaged in 1-on-1s, performance reviews, and regular feedback sessions, with a balance between technical guidance and people management. Fostered cross-functional collaboration with BE, FE, QA, DevOps and Product, integrating roles from different companies

Full stack Developer

2021-2022 *Creator of moviemirador.com*

- Developed Rest and SparQL crawlers on Kotlin
- Conducted Data Analysis using Jupyter Notebooks
- Created a multi-platform app using Flutter

Senior Software Engineer

2017-2020 *AUTO1 Group*

- Developed libraries for all Java services, including custom service discovery
- Maintained Jenkins CI / CD, and Elastic Search related services
- Redefined and dockerized services architecture

Technical Leader

2017 *bonial.com*

- Grew team ownership on their services and infrastructure
- Led the move to a fast delivery environment, releasing several times a day across different services

Senior Developer

2015-2016 *bonial.com*

- Developed new Java BE solutions for new apps
- Maintained a centralized Groovy API for interaction with mobile front-end apps

2012-2014 *Protec Mobile*

- Designed and developed a Java application for information analysis of their mobile user DB

2012 *Startup*

- Created a multiplatform app with Ruby using RoR

Junior Developer

2009-2010 *Alten*

- Created Coslada town hall's web portal using Java, enabling users to create accounts, spaces, and upload media content
- Implemented Spring MVC and Hibernate

2008 *Alten*

- Developed a new small Java desktop application using Struts to manage an SQL Server DB

2007-2008 *Tecnocom*

- Maintained, corrected bugs, and implemented new features for the BBVA Java platform
